Maintenance

- Check the condition of the metal structure.
- Check the condition of the shell.
- Ensure there are no cracks or dangerous breaks.
- Check the condition of the end caps.

Cleaning

- Cleaning of the metal structure: methylated spirits may be used only in extreme cases. Never use solvent.
- Remove dust with a dry cloth or brush. Clean with a sponge or cloth using neutral soap or a mixture of water and vinegar. For embedded dirt, grease residues or stains, ammonia can be used.
